Assignment 8:

```
import React, { useState } from 'react';
import Header from './components/Header';
import Navbar from './components/Navbar';
import Footer from './components/Footer';
import HomeView from './pages/HomeView';
import StudentsView from './pages/StudentsView';
import BlogsView from './pages/BlogsView';
import OpportunitiesView from './pages/OpportunitiesView';

/**
 * App Component (Root Shell)
 * Demonstrates:
 * - Functional component composition
 * - React state management with useState for client-side view navigation
 * - Conditional rendering without browser full-page reload
 * - Reusable UI components (Header, Navbar, Footer)
 */
export default function App() {
  // Navigation state: 'home' | 'students' | 'blogs' | 'opportunities'
  const [currentView, setCurrentView] = useState('home');

  // View navigation handler
  const handleNavigate = (viewId) => {
    setCurrentView(viewId);
    // Smooth scroll to top of content when switching views
    window.scrollTo({ top: 0, behavior: 'smooth' });
  };
